- | | |
|---------|---------|
| 1. (d) | 21. (c) |
| 2. (b) | 22. (d) |
| 3. (a) | 23. (d) |
| 4. (b) | 24. (a) |
| 5. (c) | 25. (a) |
| 6. (c) | 26. (b) |
| 7. (a) | 27. (a) |
| 8. (b) | 28. (a) |
| 9. (c) | 29. (c) |
| 10. (b) | 30. (d) |
| 11. (a) | 31. (b) |
| 12. (d) | 32. (c) |
| 13. (c) | 33. (b) |
| 14. (b) | 34. (d) |
| 15. (d) | 35. (a) |
| 16. (d) | 36. (d) |
| 17. (a) | 37. (d) |
| 18. (a) | 38. (c) |
| 19. (c) | 39. (b) |
| 20. (c) | 40. (b) |

1. A boy and a girl begin at the same position in the center of a large flat field. The boy walks in a straight line 50 meters due north from the starting position and stops. The girl walks in a straight line 30 meters due south from the starting position and stops. What is the position of the girl relative to the boy?

(a) She is 20 meters north of the boy.	(c) She is 80 meters north of the boy.
(b) She is 20 meters south of the boy.	(d) She is 80 meters south of the boy.

2. A boy and a girl begin at the same position in the center of a large flat field. The boy walks in a straight line 50 meters due north from the starting position and stops. The girl walks in a straight line 30 meters from the starting position and stops. How far is the girl from the boy?

(a) She must be 20 meters from the boy.	(c) She must be 80 meters from the boy.
(b) She must be at least 20 meters but no more than 80 meters from the boy.	(d) She must be more than 80 meters from the boy.

3. Below are four statements about objects. Of the statements, which is correct?

(a) An object in equilibrium may be at rest.	(c) An object in equilibrium may be moving with uniform (non-zero) acceleration.
(b) An object in equilibrium must be at rest.	(d) An object in equilibrium must be moving with uniform (non-zero) acceleration.

4. It takes a runner 12.5 seconds to run a straight-line distance of 100 meters. What is her average speed for the 100 meter run?

(a) 0.125 meter per second	(c) 112.5 meters per second
(b) 8.0 meters per second	(d) 1250 meters per second

Base your answers to questions 5 through 7 on the following information.

A box is sitting on a long, horizontal floor. The box is kicked, giving it an initial velocity of 12 meters per second. The box undergoes uniform acceleration as it slides to a stop in 3.0 seconds.

5. What is the average speed of the box as it slides?

(a) 3.0 meters per second	(c) 6.0 meters per second
(b) 4.0 meters per second	(d) 12 meters per second

6. How far does the box move during its 3.0 second slide?

(a) 3.0 meters	(c) 18 meters
(b) 4.0 meters	(d) 36 meters

7. What is the magnitude of the acceleration of the box during its 3.0 second slide?

(a) 4.0 meters per second ²	(c) 36 meters per second ²
(b) 18 meters per second ²	(d) 72 meters per second ²

8. A car moving on a straight road increases its speed uniformly from 30. meters per second to 40. meters per second in 4.0 seconds. What is the average acceleration of the car?
- (a) 0.25 meter per second² (c) 10. meters per second²
(b) 2.5 meters per second² (d) 40. meters per second²
9. A ball is thrown upward with an initial speed of 20. meters per second. If it is caught at the same height from which it was thrown, what is its velocity just before it is caught? [Ignore air friction.]
- (a) 4.0 meters per second downward (c) 20. meters per second downward
(b) 10. meters per second downward (d) 40. meters per second downward
10. An arrow is shot directly upward at a speed of 40. meters per second. How long after it is shot will it reach its maximum height? [Assume $g = 10.$ meters per second² and ignore air friction.]
- (a) 2.0 seconds (c) 10. seconds
(b) 4.0 seconds (d) 40. seconds
11. A rock is thrown directly downward from a bridge toward the water below. Of the following statements about the rock's speed, which is correct? [Ignore air friction.]
- (a) The rock's speed increases during the trip.
(b) The rock's speed first increases, then decreases during the trip.
(c) The rock's speed first decreases, then increases during the trip.
(d) The rock's speed remains constant throughout the trip.
12. A rock is thrown directly downward from a bridge toward the water below. Of the following statements about the rock's acceleration, which is correct? [Ignore air friction.]
- (a) The rock's acceleration increases during the trip.
(b) The rock's acceleration first increases, then decreases during the trip.
(c) The rock's acceleration first decreases, then increases during the trip.
(d) The rock's acceleration remains constant throughout the trip.
13. A net force of 24 newtons is acting on a block of wood of mass 3.0 kilograms resting on a horizontal frictionless surface. What will be the acceleration of the block?
- (a) zero (c) 8.0 meters per second²
(b) 0.125 meter per second² (d) 72 meters per second²
14. A force of 30. newtons is applied to a 3.0 kilogram box resting on a horizontal **frictional** floor. The box accelerates in the direction of the applied force at 8.0 meters per second². What is the force of friction acting on the box?
- (a) 2.0 newtons (c) 24 newtons
(b) 6.0 newtons (d) 30. newtons
15. A book has a mass of 2.0 kilograms. What is its weight in a location where $g = 10.$ meters per second²?
- (a) 0.2 newton (c) 5.0 newtons
(b) 2.0 newtons (d) 20. newtons

Base your answers to questions 16 through 18 on the following information. Ignore friction.

Toy train **Car A**, which has a mass of 2.0 kilograms, is coasting along a straight, level track at a speed of 10. meters per second when it collides with **Car B**, which has a mass of 3.0 kilograms, and is initially at rest. When the two cars collide they hook together and move as one unit.

16. What is the momentum of **Car A** before it collided with **Car B**?
 - (a) zero
 - (b) 0.20 kilogram·meter/second
 - (c) 5.0 kilogram·meters/second
 - (d) 20. kilogram·meters/second
17. What is the momentum of **Car B** before it is hit by **Car A**?
 - (a) zero
 - (b) 0.20 kilogram·meter/second
 - (c) 5.0 kilogram·meters/second
 - (d) 20. kilogram·meters/second
18. What is the speed of the two cars after the collision?
 - (a) 4.0 meters per second
 - (b) 5.0 meters per second
 - (c) 6.7 meters per second
 - (d) 10. meters per second

Base your answers to questions 19 through 21 on the following information.

Three blocks are placed on a frictionless table as shown in the diagram below. The masses of the blocks are indicated on the diagram. A 25 newton force acts on the blocks in the direction shown.

19. What is the acceleration of the set of blocks?
 - (a) 0.2 meter per second² to the right
 - (b) 0.4 meter per second² to the right
 - (c) 2.5 meters per second² to the right
 - (d) 250 meters per second² to the right
20. What is the *net* force acting on the 5.0 kg block?
 - (a) 2.0 newtons
 - (b) 5.0 newtons
 - (c) 12.5 newtons
 - (d) 25 newtons
21. What force is the 3.0 kg block exerting on the 2.0 kg block?
 - (a) 8.3 newtons
 - (b) 10. newtons
 - (c) 17.5 newtons
 - (d) 25 newtons

32. Of the following temperature - time graphs, which best represents the graph of the temperature of a cup of boiling water allowed to sit at room temperature for a long time?

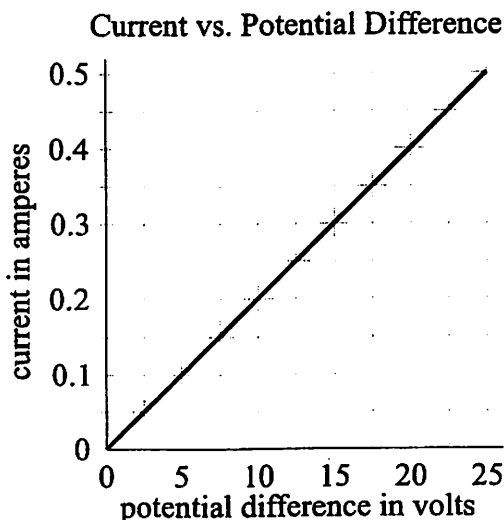

33. The diagram below shows a transverse wave moving to the right. What is the size of the distance marked "D" in the diagram?

- (a) one-fourth wavelength
 (b) one-half wavelength
 (c) one wavelength
 (d) one amplitude
34. A sound wave has a frequency of 85 Hertz. If the sound is traveling at a speed of 340 meters per second, what is the wavelength of the sound wave?
- (a) 0.25 meter
 (b) 1.0 meter
 (c) 2.0 meters
 (d) 4.0 meters
35. A student is listening to a sound wave produced by a tuning fork. What will she hear if the amplitude of the wave is increased?
- (a) The sound will become louder.
 (b) The sound will become quieter.
 (c) The pitch (note) of the sound will become higher.
 (d) The pitch (note) of the sound will become lower.

36. A 12-volt battery is used to light a light bulb. If the current in the bulb is 3.0 amperes, how much power is being converted in the bulb?
 (a) 0.25 watt (c) 15 watts
 (b) 4.0 watts (d) 36 watts
37. A student measures the current in a piece of metal wire as he varies the potential difference (voltage) across the wire. A graph of his results is shown below. What is the resistance of this piece of wire?

- (a) 0.020 ohm (c) 12.5 ohms
 (b) 0.080 ohm (d) 50. ohms
38. Two resistors with resistances of 3.0 ohms and 12 ohms are connected in **series**. What is the combined (equivalent) resistance of this combination?
 (a) 0.42 ohm (c) 15 ohms
 (b) 2.4 ohms (d) 36 ohms
39. Two resistors with resistances of 3.0 ohms and 12 ohms are connected in **parallel**. What is the combined (equivalent) resistance of this combination?
 (a) 0.42 ohm (c) 15 ohms
 (b) 2.4 ohms (d) 36 ohms
40. Two wires are made of the same metal and are kept at the same temperature. One wire is thinner and longer than the other. Of the following statements about the resistances of the wires, which is correct?
 (a) Both wires have the same resistance.
 (b) The longer, thinner wire has a higher resistance than the shorter, thicker wire.
 (c) The longer, thinner wire has a lower resistance than the shorter, thicker wire.
 (d) Neither wire will have any resistance at all.
